Introduction

The AACP *Basic Resources for Pharmacy Education* is produced as a guide for those developing or maintaining the library collections that serve colleges and schools of pharmacy. The goal of the Basic Resources list is to make recommendations of books and other works to be included in pharmacy libraries, but not all titles are required to be purchased. Each pharmacy college has its own mission and its own program(s), and so each college's library collection must reflect that mission and support the college's program(s). Excellent library collections are built by knowledgeable librarians and drug information specialists using their professional judgment along with the expertise of the college's faculty. The Basic Resources list should not be used as a benchmark and is not prescriptive but is instead a starting place for librarians who are building a new collection or maintaining an established one.

Methods

The Basic Resources list is a service project of the Library and Information Sciences Section of AACP. The list consists of 64 subject sections that are each reviewed every three years by a contributor who makes suggestions for additions and deletions. Contributors consist of librarians and drug information specialists and are assigned up to three subject sections to review.

Using the current list as a starting point, contributors consult with faculty from their institution who have expertise in their assigned subject section. Contributors may also utilize library catalogs, publisher's websites, book reviews in scholarly journals, and authoritative lists such as Doody's Core Titles or Choice Reviews to identify titles for their sections. Suggested additions are meant to support pharmacy curriculums that will be offered at the majority of institutions, while being mindful of the variety of programs and degrees offered at colleges and schools of pharmacy.

In general, reference books that retain their utility, volumes that have influenced major changes in pharmaceutical education, and volumes that are of sufficient interest to have been reprinted recently will be retained beyond six years and defined as a "classic". This designation is also intended for those titles that should be considered for retention when earlier books in general are being discarded. Whether or not an effort should be made to acquire these titles for a collection that lacks them depends on the importance of their content to the individual school. All non-English language books and other materials, including foreign pharmacopoeias because of irrelevancy to basic curriculum, will be omitted from the list.

The editors of the Basic Resources list will compile the recommended additions and deletions for each review cycle and an advisory panel of pharmacy librarians and faculty members vote on the suggested changes. Approved changes are subsequently incorporated into the list's database. The entire Basic Resources list is reviewed every three years and published semiannually.

Results

The following subject sections were updated in this edition of the Basic Resources list: A.0 Basic Sciences, A.1 General Chemistry, A.2 Biochemistry, A.3 Immunology, A.4.a Molecular Biology and Biotech, B.6.0 Cosmetics, B.7.0 Nuclear, B.8.b Veterinary Pharmacology, B.9 Pharmacogenetics, D.3.0 Therapeutics, D.3.c Nutrition, D.3.g Psychiatry, D.3.j Pregnancy and Lactation, X.2.b Handbooks, and X.5 Directories. Following recommendations from the contributors and review by the advisory panel, 37 books and other works were added to the list and 30 were removed from the list.

Future Directions

The next edition of the Basic Resources list will take place during the Winter of 2022 with a target publication date of February 2022.
