The #TwitFace program provides a convenient and efficient tool for #Twitter and #Facebook users. The central purpose of this project is to create a program that is able to communicate with both the #Twitter and #Facebook API’s, thus allowing the user to post an identical status simultaneously. The program will require the user’s login information for both accounts and will prompt the user to enter a status to share. The user will also have the option to share a pre-generated post from a generic list of options.
